

Terms of Reference (ToR) – Long -Term Agreement (LTA) Consultancy services for Unmanned Aerial Vehicle (UAV) Survey, Topographic map preparation, Global Positioning Survey (GPS) and development of hydraulic model of Water supply projects in WaterAid Nepal working areas

Introduction

WaterAid is an International Non-profit organization with one goal: to change the world through water. Along with decent toilets and good hygiene, a reliable supply of clean water is essential for health, dignity and a life full of opportunity. Childbirth is safer, and children get the chance to grow up healthy and strong. Families thrive, and whole communities are better prepared for our changing climate and whatever the future holds. We started in 1981, when UK water companies created a single organization dedicated to tackling the global water crisis. Today, we work alongside communities worldwide, setting up entire systems that deliver clean water, decent toilets and good hygiene for millions. And we get the people, policies and money in place to keep these systems working – and the water flowing for good. So that people have safe, reliable services that last. Our work with communities, partners, allies, and supporters has already enabled millions of people to shape their futures with dignity and confidence.

Our vision is 'A world where everyone, everywhere has sustainable and safe water, sanitation and hygiene'.

WaterAid has been working in Nepal since 1987, covering all seven provinces. We team up with local partners, technical experts, governments, and communities to support the delivery of integrated and inclusive WASH services in hard-to-reach communities, helping to transform lives.

Background

WaterAid Nepal (WAN) works to improve access to safe, reliable, and sustainable water, sanitation, and hygiene (WASH) services, particularly for marginalized and underserved communities. In Nepal's evolving context, where many rural settlements are transitioning into emerging municipalities and urban centres, the demand for reliable, efficient, and sustainable water infrastructure is steadily increasing, particularly in the Terai region, including Madhesh Province.

One of the key objectives of WaterAid Nepal's programmes is to strengthen the operational efficiency, planning capacity, and long-term sustainability of water utilities and Water Supply and Sanitation User Committees (WSSUCs). In many water supply systems, network expansion is often undertaken in response to growing demand, with limited access to updated geospatial data, asset inventories, hydraulic modelling, and evidence-based system planning. As a result, water utilities face challenges in optimizing system performance, addressing hydraulic constraints, planning future expansion, and improving service delivery. Currently, Nepal Water Supply Corporation (NWSC) operates branch offices in nine towns of Madhesh Province: Rajbiraj, Lahan, Janakpur, Jaleshwar, Gaushala, Malangwa, Gaur, Kalaiya, and Birgunj.

To address these challenges, WaterAid Nepal seeks to engage a qualified consulting agency to undertake Unmanned Aerial Vehicle (UAV) surveys, topographic mapping, GPS surveys, asset inventory mapping, and hydraulic modelling for selected Nepal Water Supply Corporation (NWSC) branch offices in Madhesh Province and for water supply systems in Godawari Municipality of Bagmati Province. The assignment is expected to generate high-quality geospatial datasets, asset management information, and hydraulic models that will support evidence-based decision-making, system optimization, investment planning, and future network expansion. The outputs are also expected to contribute to the development of replicable approaches for urban and emerging municipal water supply systems across WaterAid Nepal's working areas, including both the Terai region of Madhesh Province and the hill region of Godawari Municipality in Bagmati Province.

To support these objectives, WAN intends to engage a qualified and experienced consulting agency through a Long-Term Agreement (LTA) arrangement. To ensure timely access to specialized technical services across multiple programmes and geographic locations, WAN intends to establish an LTA for a period of three years. The LTA will serve as a framework arrangement under which WAN may issue assignment-specific Terms of Reference (ToR) and work orders during the agreement period, based on programmatic priorities and emerging needs.

Purpose of the Long-Term Agreement

The purpose of this LTA is to establish a roster-based contractual arrangement with one or more qualified consulting agency to conduct (UAV) drone Survey, Topographic map preparation, Global Positioning Survey (GPS) and development of hydraulic model of Nepal Water Supply Corporation (NWSC) - branch offices, Madhesh Province on an as-needed basis during the agreement period. The LTA shall provide a mechanism for WaterAid Nepal to issue assignment-specific work orders without undertaking separate procurement processes for each assignment. However, this LTA does not guarantee any minimum quantity or value of work during the contract period.

Objective of the assignment

Overall Objective:

The overall objective of this assignment is to prepare the selected NWSC branch towns in Madhesh Province and the selected WSSUC-managed water supply systems in Godawari Municipality by establishing their asset inventories and hydraulic models to support future expansion works, following the methodology provided in the subsequent sections of this ToR. In addition, the assignment aims to bring greater uniformity to the surveying process. This ToR is intended to engage a qualified consulting agency under a Long-Term Agreement (LTA) to prepare topographic maps, conduct Global Positioning System (GPS) surveys, develop hydraulic models, and provide technical advisory services on an as-needed basis.

Specific objectives

The specific objectives of the assignment specific works will be to:

- I. Conduct Unmanned Aerial Vehicle (UAV) surveys and prepare high-resolution digital topographic maps of selected project areas within Madhesh Province and Godawari Municipality, Bagmati Province, including the generation of georeferenced datasets and terrain information with X, Y, and Z coordinates covering existing and potential service areas.
- II. Carry out GPS surveys to collect and map existing water supply assets, service coverage areas, pipeline networks, and other relevant infrastructure required for asset inventory development and spatial planning within the project catchment areas.
- III. Develop hydraulic models of existing water supply networks and prepare technically sound pipeline designs and system improvement options to support network optimization and future service expansion in the selected project areas.

Methodology

The consulting agency shall deploy a multidisciplinary team comprising, at a minimum, a **Team Leader, UAV Engineer, GIS Specialist, Hydraulic Modelling Engineer, and Field Engineer** to undertake the assignment. The consulting agency will work closely with WaterAid Nepal, Nepal Water Supply Corporation (NWSC), Water Supply and Sanitation User Committees (WSSUCs), municipalities, and other relevant stakeholders throughout the assignment.

The consulting agency shall be responsible for coordinating with WaterAid Nepal, implementing partners, government counterparts, municipalities, and other concerned stakeholders, as required, to ensure the effective planning, implementation, quality assurance, and delivery of the assignment outputs. The assignment shall be carried out in accordance with applicable national standards, professional best practices, and WaterAid Nepal's programme requirements.

The consulting agency shall adopt a systematic workflow for UAV surveys, GPS surveys, asset inventory mapping, topographic map preparation, and hydraulic modelling, as outlined below.

Part -A: Unmanned Aerial Vehicle UAV survey

- Unmanned Aerial Vehicle (UAV) shall be used for the Aerial Photography for generation of detailed ortho-photos and digital terrain models.
- Photos shall be taken with at least 85% frontal and at least 60% side overlaps to generate accurate model.
- Structure from Motion (SFM) shall be used to calibrate the camera, generate automated tie points, and dense point clouds.
- The ground controls points shall be established using professional GPS system and used to transform the point cloud to the true ground scale.

- An accuracy assessment shall be carried out using ground control points and the respective positions after processing. In general, the RMS error in 2D positioning shall be about 0.05m (5 cm) and error in Elevation about 0.10m (10 cm).

Part -B: GPS survey

- Enough ground control points shall be established. In general, a total of 3-4 points are required per SqKm. All the control points shall be established using professional GPS with L1/L2 frequencies (professional dual-frequency GNSS receiver) and RTK (Real Time Kinematics) corrections shall be applied. Similarly, for permanent station points, minimum observation of 30 min shall be monitored and corrected with respect to the base setup at the project area.
- A Base control point shall be established for the project area and processed with reference to the permanent point established by the consulting firm in its office in Kathmandu or other area with more than 2 hours observation. Other control points shall be established with reference to this base. The coordinate of control points shall be in UTM 45N (wgs84) coordinate system.
- An accuracy assessment shall be carried out using ground control points and the respective positions after processing. In general, the RMS error in 2D positioning shall be about 0.05m (5 cm), error in Elevation about 0.1m (10 cm).
- All the assets involved in each water supply schemes (like boreholes, overhead towers, compound walls, buildings, etc shall be mapped with all its salient features covering asset management features which shall be agreed in consultation with WAN, NWSC, WSSUC, and respective municipalities.
- Best route for the pipeline alignment survey shall be carried out with prior recce in consultation with WAN, NWSC, WSSUC, and respective municipalities & ward representatives of respective areas.
- Each Household, schools and any other public & private institutions shall be mapped within the catchment area of the respective water supply scheme. Categorization can be determined in joint consultation with WAN, NWSC, WSSUC, and respective municipalities & ward representatives of respective areas.
- Any crossings or obstructions along the alignment of the pipeline route shall be clearly marked with as much detail information as possible.

Part -C: Hydraulic modelling and pipeline design

- Create and set up the project with appropriate projection and project information.
- Prepare terrain data by importing survey points and generating a Digital Terrain Model (DTM).
- Develop network layout by adding junctions, pipes, reservoirs, tanks, valves, pumps, and service boundaries.

- Draw junction areas, demand areas, and service areas for proper demand allocation.
- Assign elevation values from the terrain model to all junctions automatically.
- Input design data including demand patterns, pump curves, efficiency curves, headloss curves, and tank/reservoir properties.
- Process demand to compute junction-level water demand using demand areas, demand points, and junction areas.
- Validate the network using the “Check Network” tool and correct any invalid or redundant components.
- Run hydraulic analysis using EPANET engine settings and adjust hydraulic, time, quality, and energy parameters.
- Perform pipe sizing by assigning pipe type, diameter, and class, then iterating analysis to meet design criteria.
- The hydraulic model shall include calibration and validation using available operational data wherever feasible and shall demonstrate compliance with accepted water supply design standards.
- Interpret outputs such as pressure distribution, head distribution, demand patterns, and hydraulic profiles.
- Export maps, design tables, profiles, and network models in formats such as DXF, KML, SHP, Excel, or EPANET INP for documentation.

Scope of the assignment

Under this Long-Term Agreement (LTA), the specific scope of work for each assignment shall be defined through individual work orders or assignment-specific Terms of Reference (ToR), based on programmatic priorities and emerging needs. The consulting agency shall provide specialized technical services related to Unmanned Aerial Vehicle (UAV) surveys, topographic mapping, GPS surveys, asset inventory development, hydraulic modelling, and associated technical support services. In addition, the consulting agency shall support capacity-building initiatives, technical reviews, quality assurance processes, and research activities as specified in individual assignment-specific ToRs.

The scope of work shall include, but not be limited to, the following:

A. Survey Planning, Coordination and Compliance

- Ensure the timely and effective completion of all assignment activities in accordance with the agreed work plan, approved methodology, and assignment schedule.
- Coordinate with relevant government authorities, municipalities, water utilities, and other stakeholders to obtain all necessary legal, statutory, administrative, and operational approvals required for UAV surveys, GPS surveys, topographic mapping, and hydraulic modelling activities.

- Undertake site assessments and planning activities required for the successful implementation of the assignment.
- Ensure compliance with all applicable Government of Nepal regulations, professional standards, aviation requirements, and other relevant statutory provisions.
- Implement and maintain appropriate Occupational Health and Safety (OHS) measures for all personnel involved in fieldwork, in accordance with national standards and organizational requirements.
- Establish quality assurance and quality control procedures throughout the assignment. Survey outputs and technical deliverables shall be subject to periodic review and verification by WaterAid Nepal, relevant partner organizations, and government counterparts, where applicable.

B. UAV Survey and Digital Topographic Mapping

- Conduct UAV surveys of selected project areas and collect high-resolution aerial imagery required for topographic mapping and geospatial analysis.
- Undertake all necessary ground control surveys and data validation activities to ensure the required levels of positional accuracy.
- Prepare digital topographic maps, Digital Terrain Models (DTMs), orthophotos, contour maps, and other geospatial products as specified in the assignment.
- Generate georeferenced datasets with X, Y, and Z coordinates covering existing and potential water supply service areas, including areas identified for future system expansion.
- Ensure that all mapping outputs are complete, technically sound, and compatible with the National Grid System of Nepal and other prescribed coordinate reference systems.

C. GPS Survey and Asset Inventory Mapping

- Conduct GPS surveys of existing water supply infrastructure and associated assets within the designated project areas.
- Develop and update GIS-based asset inventories, including water supply facilities, transmission and distribution networks, reservoirs, treatment units, pumping stations, service connections, and other relevant infrastructure.
- Map household coverage, institutional connections, service areas, pipeline routes, and associated infrastructure required for planning and asset management purposes.
- Capture and organize spatial and attribute data in formats suitable for integration into GIS platforms and asset management systems.

D. Hydraulic Modelling and Network Planning

- Develop hydraulic models of existing water supply systems using industry-recognized software and methodologies.

- Analyze the performance of existing networks and identify hydraulic constraints, service gaps, operational inefficiencies, and opportunities for optimization.
- Assess current and projected water demands and incorporate relevant planning assumptions into the hydraulic model.
- Prepare pipeline designs, network improvement options, and expansion plans for existing and future service areas.
- Produce hydraulic modelling outputs, technical drawings, maps, profiles, design reports, and other documentation required for planning, design, and decision-making purposes.

E. Technical Support, Capacity Building and Knowledge Sharing

The consulting agency may also be requested to provide technical support services under assignment-specific work orders, including but not limited to:

- Providing technical advice on GIS-based asset management systems, geospatial data management, hydraulic modelling, and water supply system planning.
- Supporting WaterAid Nepal, partner organizations, municipalities, water utilities, and other stakeholders in the interpretation and utilization of survey and modelling outputs.
- Conducting technical reviews, quality assurance assessments, and independent verification of maps, survey datasets, hydraulic models, and engineering outputs.
- Designing and delivering capacity-building activities, orientations, workshops, and on-the-job training related to UAV surveys, GPS surveys, GIS applications, asset management, and hydraulic modelling.
- Supporting research, innovation, and evidence-generation initiatives related to water supply service delivery, asset management, non-revenue water reduction, network expansion, and system optimization.
- Documenting lessons learned, best practices, and technical knowledge products for dissemination among sector stakeholders.

Geographic Coverage

Assignments under this Long-Term Agreement may be undertaken in municipalities and rural municipalities where WaterAid Nepal and its implementing partners are currently working, have previously worked, or may work in the future. Activities are expected to be primarily focused on selected Nepal Water Supply Corporation (NWSC) branch offices operating in Madhesh Province, as well as Water Supply and Sanitation User Committee (WSSUC) managed water supply systems in Madhesh Province. Assignments may also be undertaken in Godawari Municipality of Bagmati Province and other locations identified by WaterAid Nepal based on programmatic priorities and emerging needs

Deliverables

The deliverables described below are indicative and may vary depending on the scope, geographic coverage, and requirements of individual work orders issued under this Long-Term Agreement.

I. Digital Topographic Mapping Package

- UAV survey data and report of designated project areas, as specified in the assignment-specific ToR.
- High-resolution orthophotos and aerial imagery.
- Digital Terrain Models (DTM) and contour maps.
- Digital topographic maps covering existing and potential service areas.
- Georeferenced spatial datasets complete with X, Y, and Z coordinates.
- Ground control point data and survey accuracy documentation.

II. GIS-Based Asset Inventory and Network Mapping Package

- GPS survey data and mapping of existing water supply infrastructure and assets.
- GIS database of water supply facilities and network components.
- Mapping of household coverage, institutional connections, service areas, and pipeline networks.
- Spatial datasets suitable for integration into asset management, GIS platforms and hydraulic modelling software with EPANET or equivalent engines.
- Asset inventory report and supporting maps.

III. Hydraulic Modelling and Network Planning Package

- Hydraulic model of the existing water supply system compatible with EPANET or equivalent softwares.
- Hydraulic assessment of network performance, including identification of operational constraints and service gaps.
- Demand assessment and modelling assumptions.
- Pipeline design and network expansion recommendations for priority service areas.
- Hydraulic modelling files, maps, profiles, design calculations, and technical documentation.

IV. Technical Review, Capacity Building and Knowledge Sharing Package

Where required under assignment-specific ToRs:

- Technical review and validation of survey outputs, GIS databases, and hydraulic models.
- Capacity-building sessions for WaterAid Nepal, partner organizations, water utilities, WSSUCs, municipalities, and other relevant stakeholders.
- Knowledge products, technical notes, lessons learned, and recommendations arising from the assignment.

V. Final Project Completion Report

- Consolidated technical report summarizing methodologies, activities undertaken, outputs produced, key findings, recommendations, and project outcomes.
- Documentation of quality assurance and quality control measures undertaken during the assignment.
- Summary of stakeholder consultations, capacity-building activities, and technical recommendations.
- Complete submission of all maps, spatial datasets, hydraulic models, drawings, reports, and other assignment outputs in agreed electronic formats.

Timeline / Period of Service

The LTA shall remain valid for a period of three (3) years from the date of signing, unless terminated earlier in accordance with the agreement provisions which depends on satisfactory performance, consistent compliance to the minimum criteria as stipulated under the expected competencies, availability of funding and annual performance review by WaterAid Nepal.

During the validity of the LTA, WaterAid Nepal will issue assignment-specific work orders or ToR based on programmatic needs. The duration of each assignment will depend on its specific scope of work and will be specified in the respective ToR issued under the LTA. The Consulting agency shall complete all activities within the timelines agreed for each assignment.

Expected Competencies

The Consulting agency is expected to have following competencies -

- The consulting firm shall have minimum 3 years of experience in similar assignments.
- The team shall comprise Team leader, GIS & GPS survey specialist, surveyors, GIS data quality specialist, Asset Management specialist and hydraulic modeler.
- Team leader, GIS & GPS survey specialist, Asset Management specialist and hydraulic modeler shall have a master's or above degree in Engineering or Science/ discipline with sound knowledge and experiences of GPS surveying, GIS analytical skills, asset management plan preparation, and hydraulic modelling with minimum 5 years of experience in similar assignments.
- Surveyors shall have a bachelor's degree in civil engineering or above with minimum 3 years of experience in similar assignments.
- GIS data quality specialists shall have minimum bachelor's degree in civil engineering or other discipline with minimum 3 years of experience in similar assignments.
- The team should have Excellent analytical skills.
- Legal documents- the copy of registration, VAT registration and latest tax clearance certificate, valid operating licenses.

- Evidence of the consultancy agency's Occupational Health and Safety (OHS) policy/system, or an equivalent policy that has been formally adopted and implemented within the organization.

Documents for Submission

- Technical and financial Proposal outlining methodology, detailed budget and CV of proposed resource persons
- Organisation profile
- Company registration, VAT/PAN certificate, and latest year tax clearance (2081/82)/ tax exemption certificates, valid operating licenses.
- Documents verifying the expected competencies as stipulated in above section
- Relevant experience in facilitating/supporting similar Unmanned Aerial Vehicle (UAV) Survey, Topographic map preparation, Global Positioning Survey (GPS) and development of hydraulic model.
- Self-declaration by the applicant company/firm in the format attached to **Annex A** in this TOR.
- Financial proposal as per attached Financial Proposal format **Annex B** (NPR, including all taxes) - Unit rate for Unmanned Aerial Vehicle (UAV) Survey, Topographic map preparation, Global Positioning Survey (GPS) and development of hydraulic model

Reporting

Reporting requirements may vary depending on the individual assignment and will be detailed in each assignment-specific work order or ToR issued under the LTA. Reporting requirements may include, but are not limited to:

- **Inception Report:** Methodology, staffing, implementation schedule, quality assurance approach, and work plan.
- **Mobilization Report:** Confirmation of approvals, equipment deployment, stakeholder coordination, and site readiness.
- **Progress Reports:** Progress against agreed milestones, completed activities, challenges encountered, risk mitigation measures, and planned next steps.
- **UAV Survey and Mapping Reports:** Survey coverage, data processing methodology, accuracy assessment, and mapping outputs.
- **GPS Survey and Asset Inventory Reports:** Asset inventory findings, GIS database development, service coverage mapping, and spatial analysis.
- **Hydraulic Modelling Reports:** Model development methodology, network analysis results, design assumptions, identified constraints, and recommended system improvements.
- **Completion and Handover Report:** Summary of all outputs delivered and formal handover of datasets, models, maps, and technical documentation.

- All reports shall be submitted in editable electronic formats (Word, Excel, GIS, AutoCAD, EPANET or equivalent software formats where applicable), together with PDF versions.

Proposal Preparation and Submission

Consulting agencies are requested to submit their Technical and Financial Proposals electronically to WaterAid Nepal in accordance with the following instructions:

- The Technical and Financial Proposal shall be submitted electronically to nepal-procurement@wateraid.org with the subject line: **"Proposal Submission for Long-Term Agreement (LTA) for Unmanned Aerial Vehicle (UAV) Survey, Topographic Mapping, Global Positioning System (GPS) Survey, Asset Inventory Mapping, and Hydraulic Modelling Services."** Proposals submitted to any email address other than the one specified above shall not be considered.
- Competing consulting agencies and service providers are expected to uphold the highest standards of integrity, transparency, and professional ethics throughout the procurement process and shall refrain from any action that may improperly influence WaterAid Nepal's evaluation and selection process.
- Any attempt to exert undue influence on the proposal evaluation, review, or selection process shall result in immediate disqualification of the proposal.
- Any misrepresentation of information, including information related to professional qualifications, technical capacity, institutional experience, financial standing, or legal status, may result in rejection of the proposal and exclusion from further consideration.
- Interested consulting agencies shall submit a Financial Proposal that clearly presents an itemized cost breakdown, including applicable professional fees, taxes, VAT, duties, levies, reimbursable expenses, and any other charges required under prevailing laws and regulations.
- Proposals shall be accompanied by all relevant legal and statutory documents, including:
 - ✓ Company/Firm Registration Certificate;
 - ✓ PAN/VAT Registration Certificate;
 - ✓ Latest Tax Clearance Certificate or Tax Exemption Certificate applicable for Fiscal Year 2081/82;
 - ✓ Valid operating licenses and other applicable regulatory approvals.

Confidentiality and Data Ownership

All information, analysis, reports, datasets, and outputs produced under this agreement shall remain the property of WaterAid Nepal.

The service provider shall:

- Maintain confidentiality of all information.
- Not to disclose results to third parties without written approval from WAN.
- Secure all records and electronic datasets.

Ethical Standards and Conflict of Interest

The service provider shall:

- Avoid actual or perceived conflicts of interest.
- Comply with applicable laws and professional standards.
- Adhere to WaterAid safeguarding, anti-fraud, anti-corruption policies, Anti-money laundering policies.
- Adhere to the principles of human rights, modern slavery, gender equality, Prevention of sexual exploitation, abuse and harassment (PSEAH).

Payment Terms

Payments shall be made based on the specific scope, deliverables, and level of work defined under each assignment specific work order or ToR issued by WAN. Payments will be processed upon satisfactory completion and approval of agreed deliverables, in accordance with WAN procedures and after submission of required supporting documents and invoices by the Consulting agency.

Safeguarding

The selected Consulting agency must adhere to the WaterAid's global code of conduct and children safeguarding requirements as Safeguarding standard and policies at WaterAid which is found here www.wateraid.org/uk/safeguarding. All personnel deployed under this LTA shall complete WaterAid's safeguarding orientation prior to field deployment where required.

Contact person

Er. Dharma Ratna Chitrakar, Senior Technical Manager from WaterAid Nepal will be available to answer any queries or clarifications you might have regarding the deliverables at DharmaRatnaChitrakar@wateraid.org

To Apply

A pre-proposal meeting may be conducted, if required, to provide clarification on the assignment. The proposal submission date is at the latest by **14 September 2026**. Any clarity on the term of reference can be inquired through written email through following email. Therefore, interested agencies are requested to submit their proposal through email nepal-procurement@wateraid.org.

Proposals must be submitted in PDF format via email to nepal-procurement@wateraid.org with the subject line: **"Proposal Submission for Long-Term Agreement (LTA) for Unmanned Aerial Vehicle (UAV) Survey, Topographic Mapping, Global Positioning System (GPS) Survey, Asset Inventory Mapping, and Hydraulic Modelling Services."**

However, for each assignment-specific work order or ToR, consultant / service provider will be invited to submit separate Technical and Financial Proposals. The proposal submission deadline and other instructions will be specified in the respective work order or ToR.

ANNEXES

Annex A

Form for Submitting Self- Declaration

(This form must be submitted only using the contractor's official letterhead)

WaterAid Nepal (WAN)

.....

.....

Dear Sir/Madam,

We hereby declare that our organization has the operational capacity and the operational resources (technical, management) to successfully fulfil the requirement in accordance with ToR and:

- We do not have any personal or financial interest with any staff member at WAN.
- We hereby declare that all the information that comes to my possession and that is deliberated upon during the procurement process, especially during the evaluation, shall not be disclosed to any other party.
- We have never ever been blacklisted and/ or there was no debarring action against us for any default in supply of materials/ equipment.
- We will maintain strict confidentiality of all financial and organizational information and adhere to WaterAid's ethical standards and data protection policies."
- We have not enforced or exploited child labour or and forced labour.

We confirm that the declaration I have made above is, to the best of my knowledge are correct. I fully understand that, if WAN concludes that the declarations, I have made are false or materially misleading, WAN may refer the matter to the relevant legal authorities for them to investigate and to take appropriate legal action.

Financial Proposal Submission Form

Name of Consulting agency.: _____

Address: _____

Contact Person: _____

Telephone/Email: _____

Validity of Rates: _____ Months/Years

The financial proposal should be based on **unit rates** rather than a lump-sum budget because WaterAid Nepal will issue assignment-specific work orders over the contract period.

TABLE B-1 [For Madhesh Province]

SN.	Description	Unit	Unit Rate (NPR) (With VAT) – FY ¹ 2026/27	Unit Rate (NPR) (With VAT) – FY 2027/28	Unit Rate (NPR) (With VAT) – FY 2028/29
1	UAV Survey, Ground Control Survey, Orthophoto Generation, Digital Terrain Model (DTM) Preparation, and Digital Topographic Mapping.	1 Sq. km.			
2	GPS Survey, GIS-Based Asset Inventory Development, Household Coverage Mapping, and Pipeline Network Mapping	1 Sq.km			
3	Development of hydraulic models for existing and proposed water supply systems, including	1 Sq. km. of service area			

¹ FY = Fiscal Year of WaterAid Nepal, running from 1 April 2026 to 31 March 2027 for FY 2026/27, and correspondingly from 1 April to 31 March for subsequent fiscal years.

	network analysis, demand assessment, system optimization, and pipeline design using survey data, asset inventory information, and Digital Terrain Models (DTM).				
4	Team Leader	Person/Day			
5	GIS & GPS Survey Specialist	Person/Day			
6	Asset Management Specialist	Person/Day			
7	Hydraulic Modelling Specialist	Person/Day			
8	Surveyors	Person/Day			
9	GIS Data Quality Specialist	Person/Day			

TABLE B-2 [For Godawari Municipality, Bagmati Province]

SN.	Description	Unit	Unit Rate (NPR) (With VAT) – FY ² 2026/27	Unit Rate (NPR) (With VAT) – FY 2027/28	Unit Rate (NPR) (With VAT) – FY 2028/29
1	UAV Survey, Ground Control Survey, Orthophoto Generation, Digital Terrain Model (DTM) Preparation, and Digital Topographic Mapping.	1 Sq. km.			
2	GPS Survey, GIS-Based Asset Inventory Development, Household Coverage Mapping, and Pipeline Network Mapping	1 Sq.km			

² FY = Fiscal Year of WaterAid Nepal, running from 1 April 2026 to 31 March 2027 for FY 2026/27, and correspondingly from 1 April to 31 March for subsequent fiscal years.

3	Development of hydraulic models for existing and proposed water supply systems, including network analysis, demand assessment, system optimization, and pipeline design using survey data, asset inventory information, and Digital Terrain Models (DTM).	1 Sq. km. of service area			
4	Team Leader	Person/Day			
5	GIS & GPS Survey Specialist	Person/Day			
6	Asset Management Specialist	Person/Day			
7	Hydraulic Modelling Specialist	Person/Day			
8	Surveyors	Person/Day			
9	GIS Data Quality Specialist	Person/Day			

Note:

The quantities indicated in assignment-specific work orders may vary depending on the geographic coverage, complexity of the water supply system, number of assets to be mapped, and the scope of hydraulic modelling required. Unit rates quoted under this LTA shall be used as the basis for preparing assignment-specific budgets and work orders.

Financial Proposal Declaration

We hereby certify that the rates quoted above are inclusive of all costs necessary for the satisfactory delivery of services under this Long-Term Agreement, including VAT. The proposed rates shall remain valid for the duration specified in the proposal and shall be used as the basis for assignment-specific work orders issued by WaterAid Nepal.
